Teaching to Mastery

Dr Yeap Ban Har – Differentiation Using a Textbook

How can we use the textbook to help all pupils access the mathematics curriculum?

Many primary schools are now using a high-quality textbook to support their teaching of maths. One of the questions many schools have is about how we can still ensure that we are supporting all of our learners whilst using a textbook.

Ban Har is the author of the Maths-No Problem! Textbook series and one of the world's leading experts in teaching for mastery. On this course he will unpick how a textbook can be used to ensure that we provide for all learners.

This course is suitable for teachers who are already familiar with the principles of teaching for mastery and want to develop their understanding of how a textbook can be used to support this approach most effectively.

Cost: £215 + VAT per person
